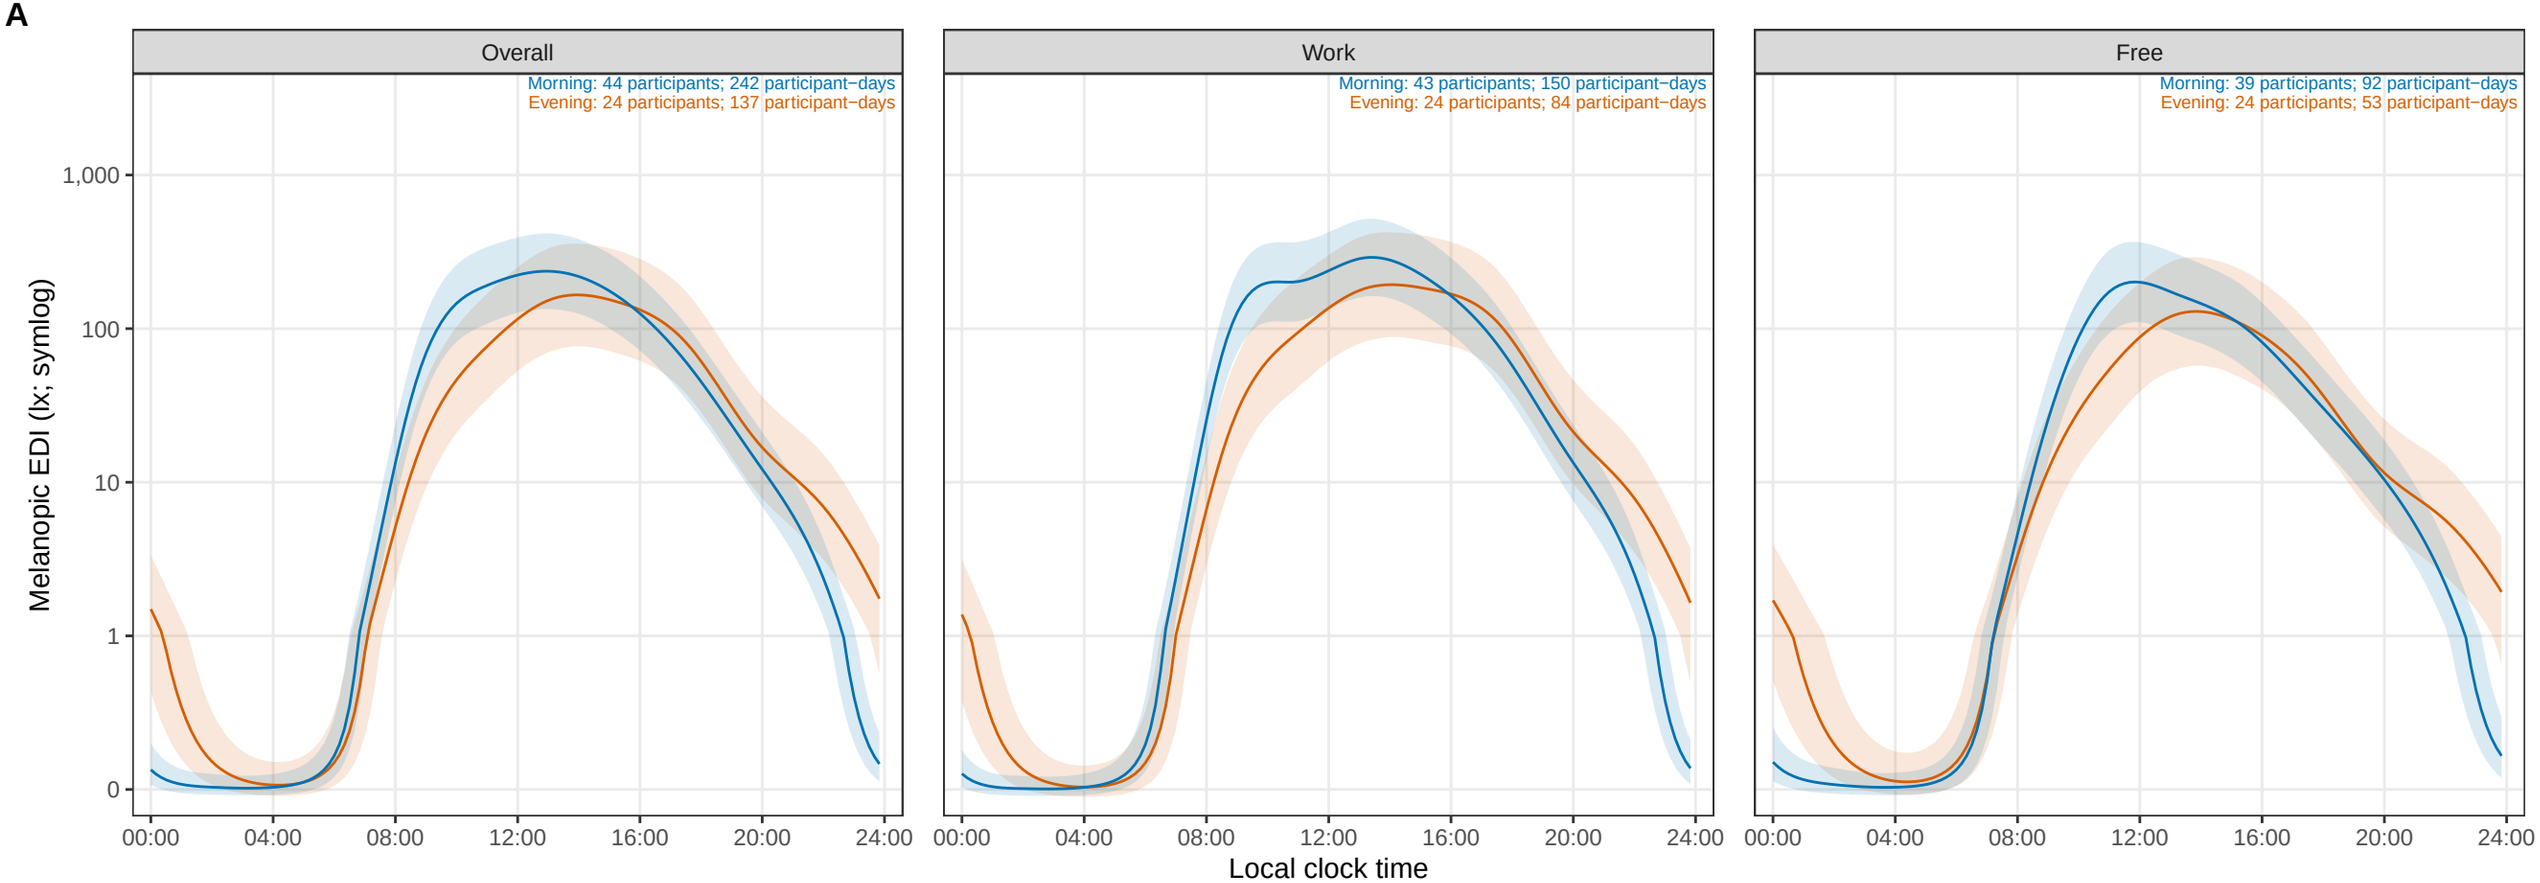
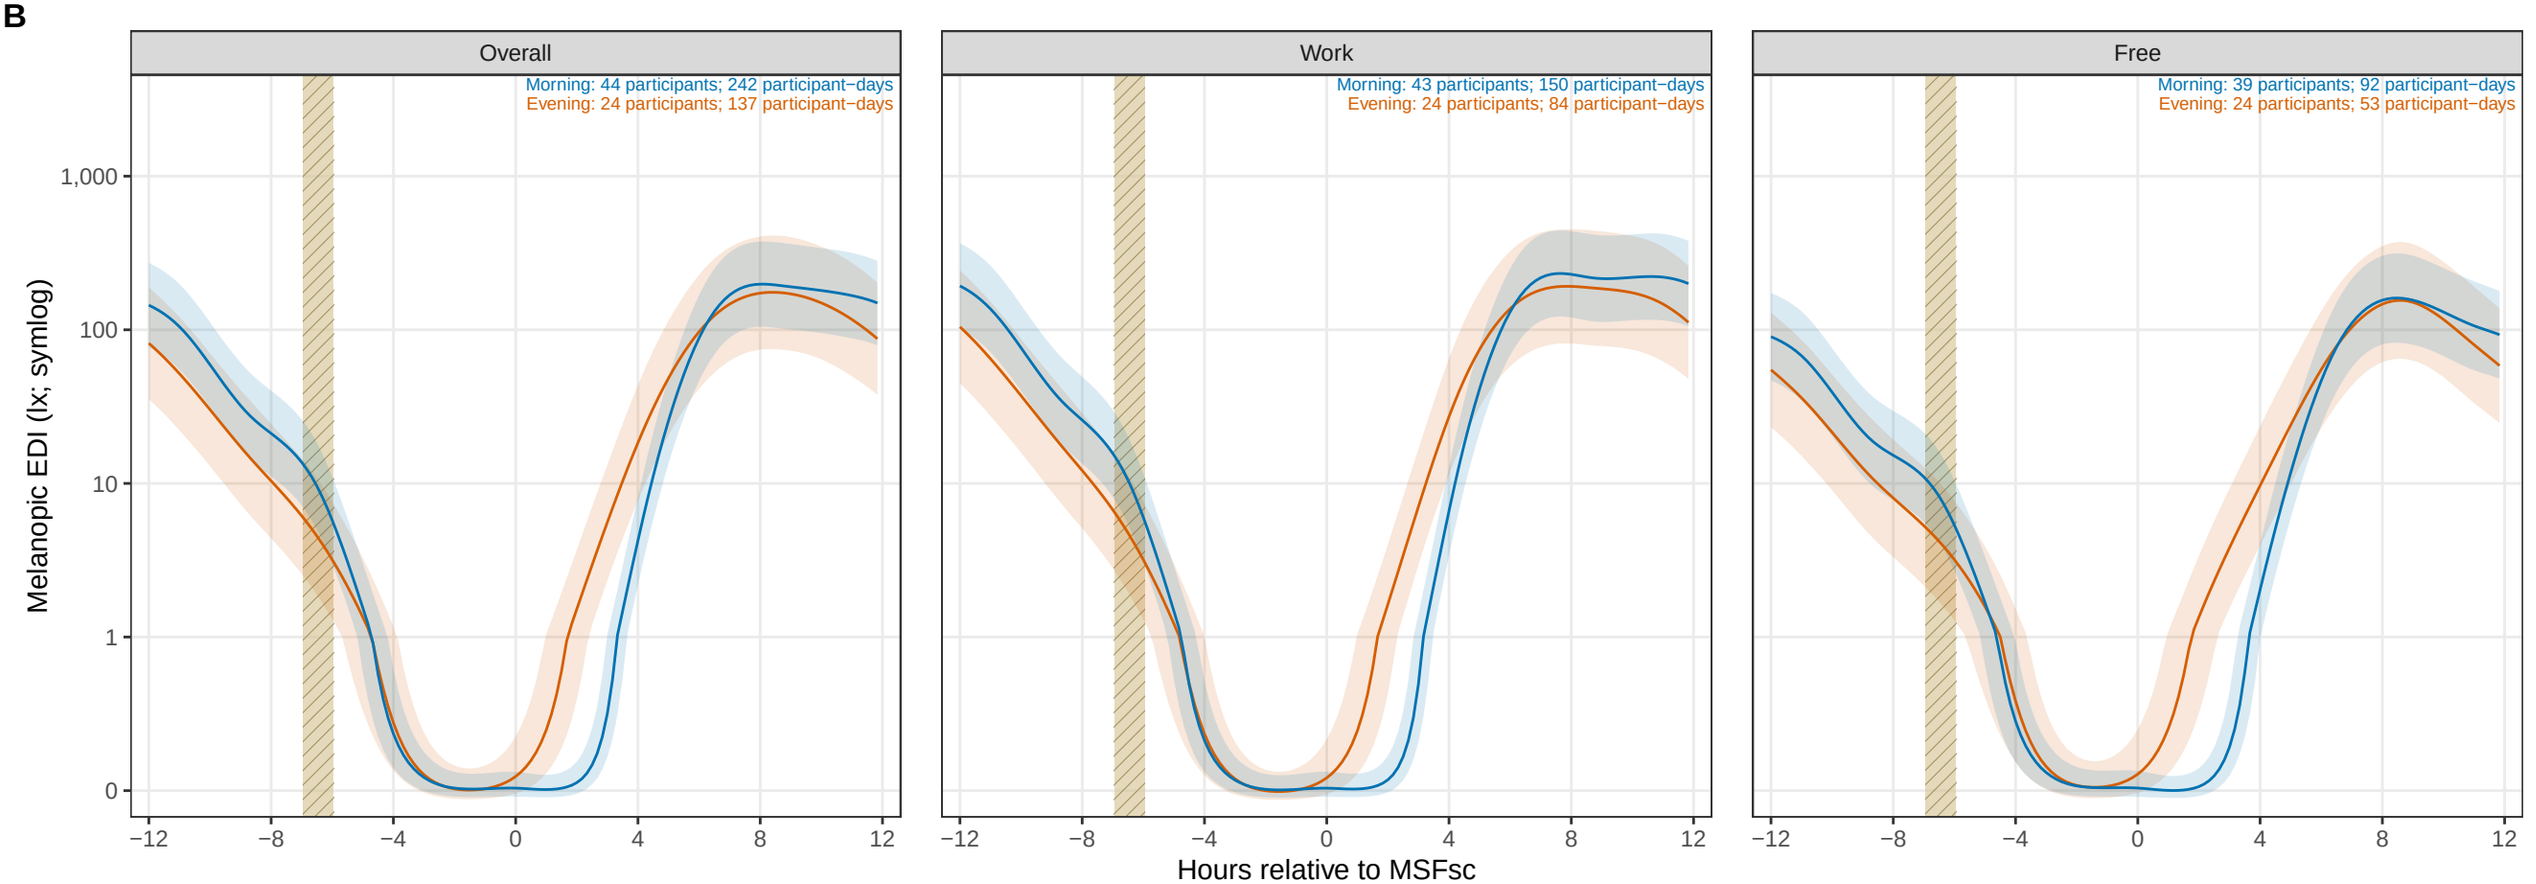
MEQ sensitivity: near−eye exposure

68 participants; 379 participant−days; 17,558 half−hours. Common photoperiod and day−type weights; site/person/day terms excluded.

A



B



A: clock time. B: circadian phase. Morning/evening pools definite and moderate MEQ categories; MSFsc uses the same people and original median.
Bands: 95% pointwise coefficient intervals. Lux values are back−transformed log−scale means; symlog is linear below 1 lx.
Striped band: DLMO reference. Time−specific support remains in the exported tables.
