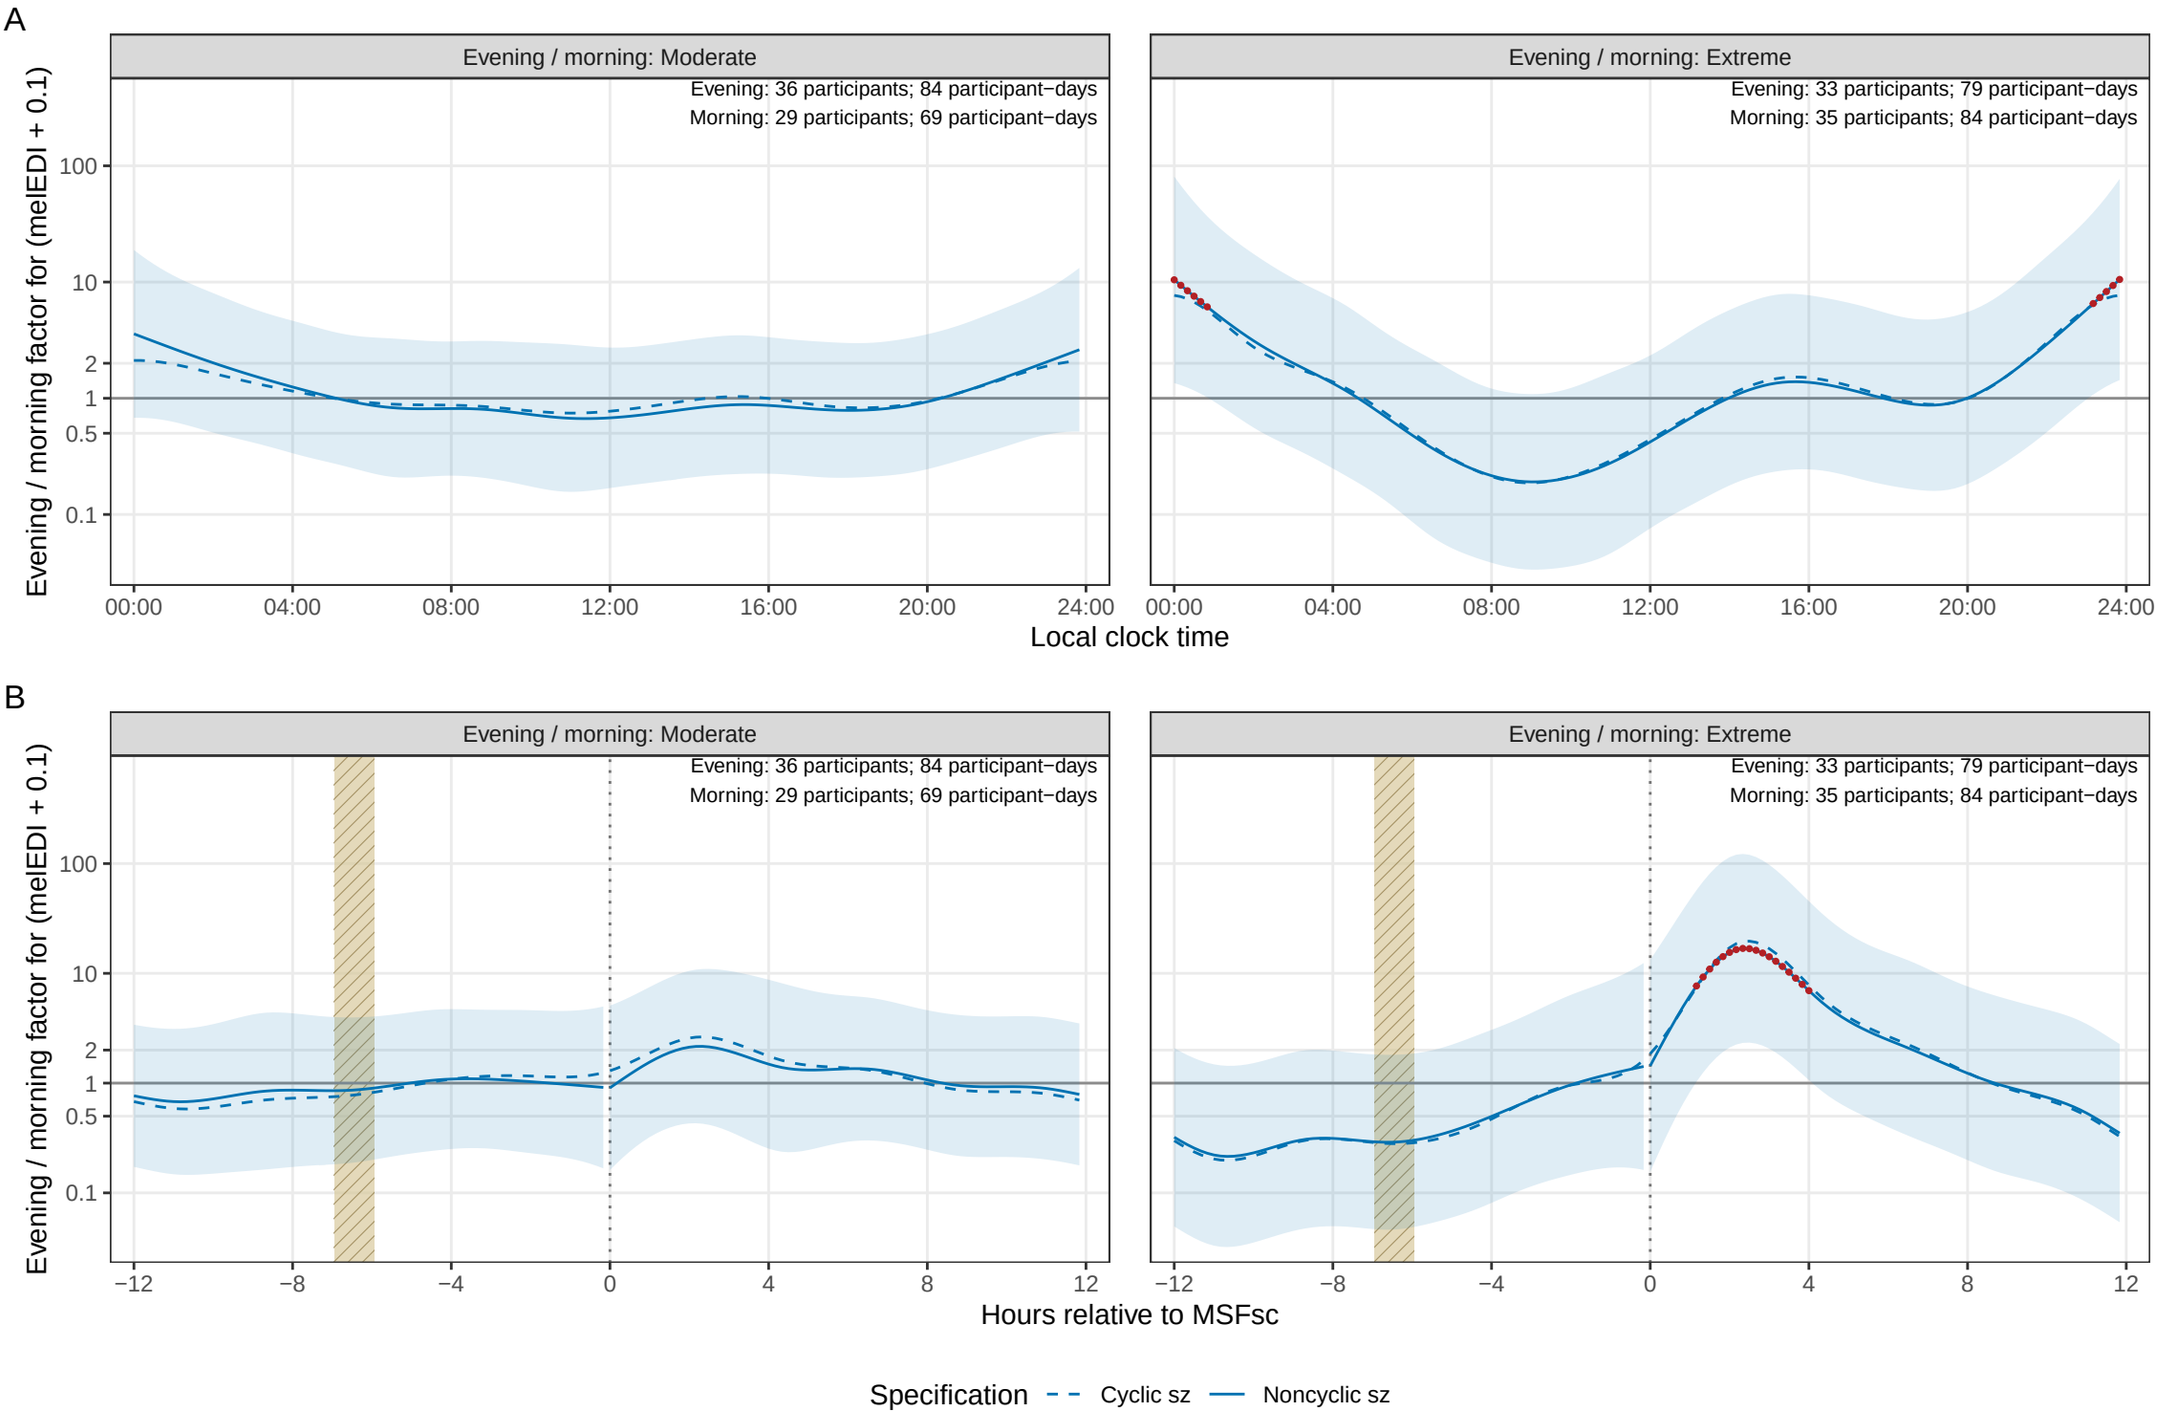
Near−eye: Free evening / morning contrasts

Same 20 registered contrasts; 10,000 coefficient draws for the new specification



A: clock time. B: MSFsc−relative time. Bands for noncyclic sz: simultaneous across 20 contrasts and the grid, 95% within each time coordinate. Red points: candidate exclusions of 1 with at least 4 people per cell. The Gaussian response has a floor at zero exposure. The phase join is at 0 h; lines and ribbons do not bridge it.
