
St Hilaire et al. (2012); numerical coordinates deposited by Walch et al. (2025). Grey points: 18 retained source coordinates.
Both curves are shown before weight normalization. DLMO is aligned 6.45 h before MSFsc.
Grey windows with dashed boundaries: primary MeLiDos phase intervals.
Striped band (−6.95 to −5.95 h): published group−average DLMO reference interval, not individual measurements.
